In recent years there has been an increasing awareness that a comprehensive understanding of language, cognitive and affective processes, and social and interpersonal phenomena cannot be achieved without

understanding the ways these processes are grounded in bodily states. The term 'embodiment' captures the common denominator of these developments, which come from several disciplinary perspectives ranging from neuroscience, cognitive science, social psychology, and affective sciences. For the first time, this volume brings together these varied developments under one umbrella and furnishes a comprehensive overview of this intellectual

movement in the cognitive-behavioral sciences. The chapters review current work on

relations of the body to thought, language use, emotion and social

relationships as presented by internationally recognized experts in these areas.
