Once considered the largest and most extensive source of biographies in the English language, *The Universal Dictionary of Biography and Mythology* contains information on nearly every historical figure, notable name, and important subject of mythology from throughout the world prior to the 20th century. Spanning all fields of human effort—from literature and the arts to philosophy and science—and touching on topics from multiple areas of mythological study, including Norse, Greek, and Roman, this extraordinary reference guide continues to be one of the most thorough and accurate collections of biographical data ever created. Combining mythological and biographical entries into a single, comprehensive list, and incorporating a unique system of indicating pronunciation and orthography, *The Universal Dictionary of Biography and Mythology* offers readers an unparalleled record of historically significant identities, from the obscure and forgotten newsmakers of yesteryear to the highly celebrated shapers of history that remain influential today. Volume II (CLU-HYS) of this exquisite four-volume set includes information on such names as Clytemnestra, Constantine the Great, Charles Dickens, Stoic philosopher Euphrates, English author John Fox, Galileo, Hercules, and many more. JOSEPH THOMAS (1811-1891) also wrote *A Comprehensive Medical Dictionary*, various pronouncing vocabularies of biographical and geographical names, and a system of pronunciation for Lippincott's *Pronouncing Gazetteer of the World*.

Cinema has been long associated with France, dating back to 1895, when Louis and Auguste Lumi_re screened their works, the first public viewing of films anywhere. Early silent pioneers Georges MZli_s, Alice Guy BlachZ and others followed in the footsteps of the Lumi_re brothers and the tradition of important filmmaking continued throughout the 20th century and beyond. In *Encyclopedia of French Film Directors*, Philippe Rège identifies every French director who has made at least one feature film since 1895. From undisputed masters to obscure one-timers, nearly 3,000 directors are cited here, including at least 200 filmmakers not mentioned in similar books published in France. Each director's entry contains a brief biographical summary, including dates and places of birth and death; information on the individual's education and professional training; and other pertinent details, such as real names (when the filmmaker uses a pseudonym). The entries also provide complete filmographies, including credits for feature films, shorts, documentaries, and television work. Some of the most important names in the history of film can be found in this encyclopedia, from masters of the Golden Age_Jean Renoir and RenZ Clair_to French New Wave artists such as Fran_ois Truffaut and Jean-Luc Godard.

This Encyclopedia offers a fresh, integrated and creative perspective on the formation and foundations of philosophy and science in European modernity. Combining careful contextual reconstruction with arguments from traditional philosophy, the book examines methodological dimensions, breaks down traditional oppositions such as rationalism vs. empiricism, calls attention to gender issues, to 'insiders and outsiders', minor figures in philosophy, and underground movements, among many other topics. In addition, and in line with important recent transformations in the fields of history of science and early modern philosophy, the volume recognizes the specificity and significance of early modern science and discusses important developments including issues of historiography (such as historical epistemology), the interplay between the material culture and modes of knowledge, expert knowledge and craft knowledge. This book stands at the crossroads of different disciplines and combines their approaches - particularly the history of science, the history of philosophy, contemporary

philosophy of science, and intellectual and cultural history. It brings together over 100 philosophers, historians of science, historians of mathematics, and medicine offering a comprehensive view of early modern philosophy and the sciences. It combines and discusses recent results from two very active fields: early modern philosophy and the history of (early modern) science. The Biographical Encyclopedia of Scientists: Second Edition, 2 Volume Set examines the lives and careers of noteworthy scientists and thinkers through the ages, illuminating the progress of science and its impact on society in general. From Aristotle and the beginnings of objective observations, to twentieth century giants, Freud and Hawking, this extensive in-depth reference explores the men and women who have shaped our ideas and the world in which we live today. Extensively revised and updated, this second edition comprises two substantial illustrated volumes that contain over 2,000 biographical entries and over half a million words. It looks and reads like a "Who's Who" of the world of scientific thought, providing an in-depth listing of prominent historical as well as modern figures of science and medicine. The main biographical entries are arranged alphabetically and summarize the individual's life and contribution to science. The volumes also include a chronology of the history of science from 590 BC to the present, a subject index, and a bibliography of key publications in the history of scientific thought. For anyone researching the world of scientific personalities and ideas, this unique reference work will be indispensable.

Gives accurate and reliable summaries of the current state of research. It includes entries on philosophers, problems, terms, historical periods, subjects and the cultural context of Renaissance Philosophy. Furthermore, it covers Latin, Arabic, Jewish, Byzantine and vernacular philosophy, and includes entries on the cross-fertilization of these philosophical traditions. A unique feature of this encyclopedia is that it does not aim to define what Renaissance philosophy is, rather simply to cover the philosophy of the period between 1300 and 1650.
